

FLH Reticle Illuminator Kit

Our new Reticle Illuminator Accessory Part # BS-FLH will ease the task of illuminating the Graflex proprietary reticle. The standard approach requires the user place a penlight at the boresight telescope light port making it somewhat cumbersome. The new Reticle Illuminator affixes to the boresight telescope making it's use 100% hands-free. The illuminator uses 4 each LR41 batteries for 8 hours of run time. The standard light color is white with blue, green, or red light available as an option.

NOTE: The light will illuminate reticle lines only and not the entire reticle making it simple to discern the reticle line upon the target.

BS-FLHH Flashlight Holder
BS-Nano-W White Light Flashlight
BS-Nano-G Green Light Flashlight
BS-Nano-R Red Light Flashlight
BS-Nano-B Blue Light Flashlight
BS-LR41 Duracell Batteries (4 per)

NOTE: Battery equivalent to LR41 is 384 and 392
