

Salvo Technologies is now Torrent Photonics, to Expand in Life Sciences, Industrial, and Government Markets

January 1, 2024 (Largo, FL)—Salvo Technologies announces today the integration of its photonics entities into the newly formed Torrent Photonics LLC. The new name and brand represent the company’s commitment to its customers in the B2B and B2G segments. Leadership, engineering, sales, and service will continue to serve customers in defense and security, industrial and semiconductor, medical and life sciences, and research.

Executive John Dougherty states, “Our growth rate has been tremendous since our start in 2006. This growth has been fueled by key acquisitions like Pixelteq, Graflex, Arrow Thin Films and Kreischer Optics. Beyond M&A growth, the group has demonstrated organic growth, 25% CAGR in 2023 alone. The focus in 2024 is to build a focused, integrated organization that provides a robust and innovative systems and optic assemblies supply chain for customers in the defense, security, medical, industrial, and commercial end markets.”

Torrent Photonics will continue to support all existing commercial customers with the teams and facilities customers have grown to trust. Torrent Photonics expects to build upon its competitive advantage in optical assemblies, spectral devices, and core enabling technologies, including optical coatings, fabrication, and photolithography.

About Torrent Photonics

Formerly Salvo Technologies, a private equity group made up of twelve divisions in precision optics, aspheres, thin film lithography, optical materials, and other photonic components, the newly formed Torrent Photonics is headquartered outside of Tampa, FL, and is a US manufacturer of optical components, assemblies, and devices. Torrent Photonics serves DoD prime contractors, and commercial customers in life sciences, medical devices, semiconductor, and industrial segments.
